What Is Percocet 10/325 mg?

Percocet is a prescription medication that combines two active ingredients:

- **Oxycodone (10 mg):** An opioid pain reliever
- **Acetaminophen (325 mg):** A non-opioid pain reliever and fever reducer

This combination is used to treat **moderate to severe pain** when other treatments are not sufficient.

Oxycodone works by interacting with opioid receptors in the brain to reduce the perception of pain, while acetaminophen enhances pain relief and may reduce fever.
