## **What Is Vicodin?**

**Vicodin is a prescription medication that combines [hydrocodone](#) (an opioid pain reliever) and acetaminophen (a non-opioid pain reliever). It is commonly prescribed for moderate to severe pain, such as after surgery or injury.**

### **Key Uses:**

- **Post-surgical pain relief**
- **Injury-related pain**
- **Severe chronic pain (in limited cases)**

### **Important Note:**

**Because it contains an opioid, Vicodin has a high risk of dependency and misuse, which is why it is strictly regulated.**

### **Benefits of Telehealth:**

### **The Reality:**

Discuss your symptoms, history, and pain level.

The doctor determines the best course of treatment.
  - 4. Prescription (If Appropriate)**  
If Vicodin or another medication is medically necessary, a prescription is sent to a licensed pharmacy.
